

# ASHRAE VIRTUAL ANNUAL CONFERENCE

▶▶▶▶ June 28-30, 2021

## Seminar 19-Infrared Heating and Grow Facilities

### “Infrared Heating”

(Basic theory and application of gas fired infrared heat)

**Kevin Mahoney**

**Vice President of Sales**

**( [kevin.mahoney@specifiedair.com](mailto:kevin.mahoney@specifiedair.com) )**

## Learning Objectives

- Understand the physical properties of infrared radiation.
- Identify the difference in thermal efficiency and radiant efficiency.
- Identify the advantage of infrared radiant heat for plants in a greenhouse.
- Understand the comparison of infrared heated greenhouses compared to indoor grow houses.

*ASHRAE is a Registered Provider with The American Institute of Architects Continuing Education Systems. Credit earned on completion of this program will be reported to ASHRAE Records for AIA members. Certificates of Completion for non-AIA members are available on request.*

This program is registered with AIA/ASHRAE for continuing professional education. As such, it does not include any content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product. Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

# Where to apply infrared systems

- Warehouses / Industrial facilities
- Distribution / Fulfillment Centers
- Aircraft Hangars
- CNG vehicle service facilities
- Outdoor Venues

# Types of Infrared Heat

## High Intensity

Spot heating applications

## Low-Intensity

- Flexible design
- Ideal for spot or general space heating
- Lower clearances to combustibles
- Low or high bay buildings

### Controls:

- Single Stage
- Two Stage
- Fully Modulating

# Infrared Heat History

Discovered in the year  
1800  
by Sir William Herschel

# Infrared Heating Utilizes All Methods of Heat Transfer

**Convection**

**Conduction**

**Radiation**

# The Process of Infrared

**90°F (32°C)  
CEILING TEMPERATURE**

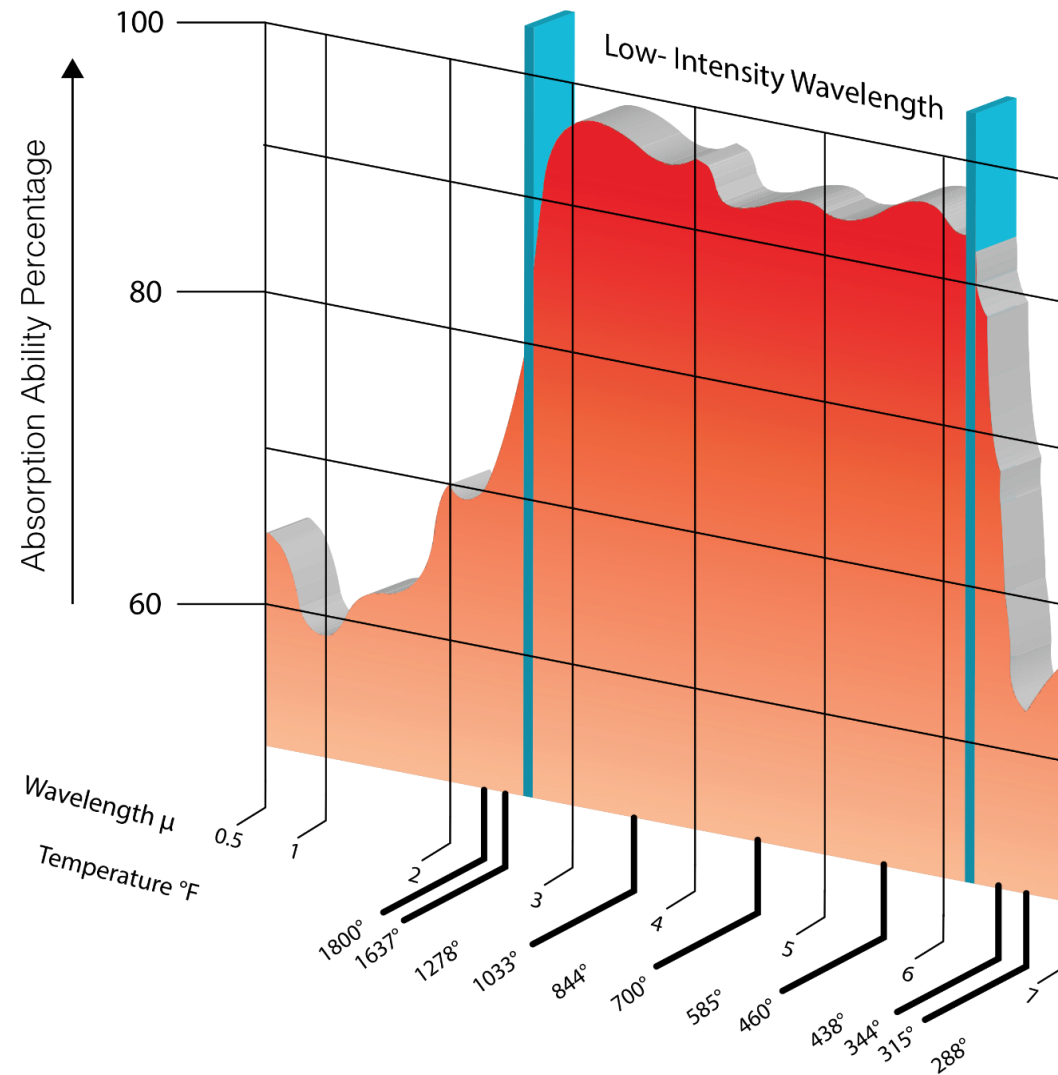

**HOW WARM AIR  
HEATS A  
BUILDING**

**60°F (16°C)  
GROUND LEVEL TEMPERATURE**

# Absorption of Infrared Energy by Concrete

# Emissivity

## MATERIAL

Aluminized Steel (Heat Treated)

Hot Rolled Steel

Porcelainized Steel

Cast Iron

Stainless Steel (type 304)

 Paint

## EMISSIVITY

0.80

0.80

0.92 to 0.96

0.95

0.44 to 0.62

0.80

# Reflectivity

## **MATERIAL**

**Aluminum (Mill Finish)**

**Aluminum (Polished)**

**Stainless Steel (Type 304)**

## **REFLECTIVITY**

**0.91 to 0.95**

**0.91 to 0.95**

**0.48 to 0.66**

# Infrared Design Concepts

- **Sufficient “Charge”**
  - Floor must exchange energy with surroundings
- **Heat distribution**
  - Must heat floor evenly to increase MRT
- **Design for comfort**
  - Receive gentle blanket of infrared heat

# Stefan-Boltzmann Law

$$E^* = \sigma T^4$$

Where  $\sigma$  (sigma) =  $5.67 \times 10^{-8} \text{ Wm}^2 \text{ K}^4$   
and  $T$  is the temperature in Kelvin.

- A small increase in emitter temperature results in a large amount of heat transfer to people and objects.
- An increase in heat transfer to people and objects raises the MRT.

# ASHRAE 55

## OPERATIVE TEMPERATURE ( $T_o$ ) CALCULATIONS

*Formula:* 
$$t_o = \frac{\text{MRT} + t_a}{2}$$

### Air Heating (example)

MRT = 65°F       $T_a = 75^\circ\text{F}$

$$T_o = \frac{65^\circ\text{F} + 75^\circ\text{F}}{2} = 70^\circ\text{F}$$

# ASHRAE 55

## OPERATIVE TEMPERATURE ( $T_o$ ) CALCULATIONS

*Formula:* 
$$t_o = \frac{\text{MRT} + t_a}{2}$$

### **Radiant Heating (example)**

**MRT = 75°F       $T_a = 65^\circ\text{F}$**

$$T_o = \frac{75^\circ\text{F} + 65^\circ\text{F}}{2} = 70^\circ\text{F}$$

**Increasing the Mean Radiant  
Temperature (MRT) improves the  
Operative Temperature ( $t_o$ )**

# Advantage: Infrared

**Thermal Efficiency**  
(heat transfer losses)

$$1,000,000 \text{ Load} \\ \div .80$$

---

1,250,000 btu/hr  
Unit Size

**Radiant Efficiency**  
(heat transfer increases)

$$1,000,000 \text{ Load} \\ \times .85$$

---

850,000 btu/hr  
Unit Size

# Infrared Heaters deliver more heat energy than any other type of heat.

- Converting energy input into useable radiant heat
- AHRI 1330 measurement methodology

# Benefits of Low-Intensity Infrared

**Energy Efficient**

**Easy to Install,  
Operate, Maintain**

**Clean, Quiet,  
Draft Free Heat**

**Quality Product with  
Field-Proven Performance**

# Simple “Stick” Heater

- Single Stage
- Positive Pressure
- Low Cost
- External Blower

# Harsh Environment “Stick” Heater

- Hazardous Environments
- Suitable for Car Washes
- Outdoor Use
- Stainless Steel Reflector

# Two directional “Stick” Heater

- Combines **two** burners into one.
- Burner fires in **two** directions
- Reduces gas, OSA, vent & electrical connections
- Straight, U, L, “box” configurations

# Burners in Series

- Vacuum Fired
- Burners In Series
- Most Even Heat
- Lowest Operating Cost
- Custom Design

# Burners in Series Layout

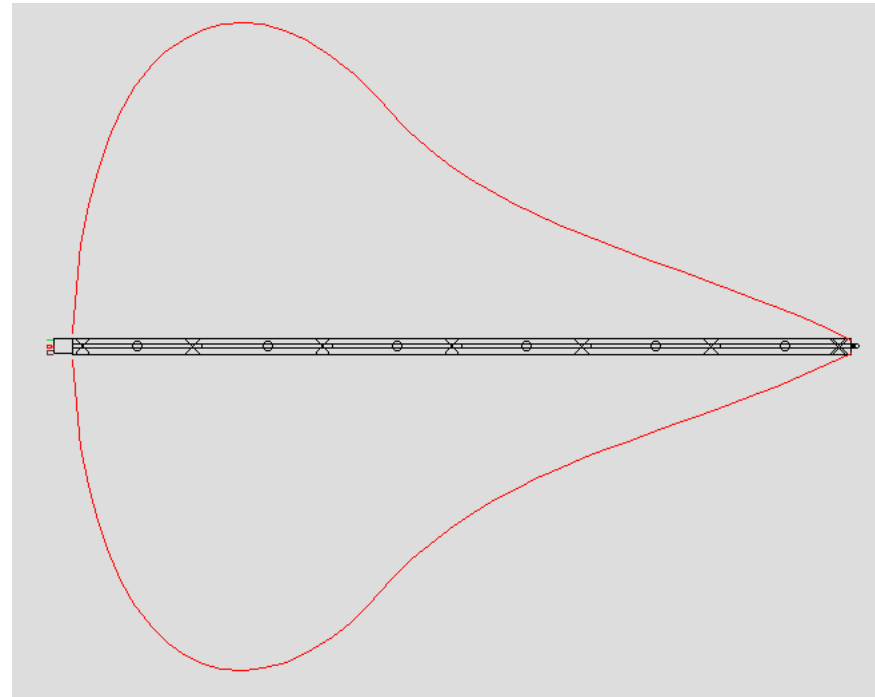

# Burners-In-Series Condensing System Design

- **Three or more burners in a single heat exchanger with 10' -60' heat exchanger between burners.**
- **Long lengths of evenly heated radiant tube**
- **More even heat felt by occupants**
- **Flue gasses condense in the heat exchanger, double coated porcelain tubing**
- **Up to 12 burners vented at a single vent penetration**
- **Long, custom shaped systems provide heat where needed and minimize the need for roof penetrations even in large buildings.**

# Radiant Pattern, Straight Tube Heaters

# Radiant Pattern, Burners in Series

# Radiant Pattern, U-Tube Configuration

# Control Options

- Zone Sensor
- Analog Input (0-10v, 4-20mA) from a building management system
- Potentiometer (wall mounted dial)
- Electronic Thermostat
- Building Management System interface available

# Aircraft Hangars

# Aircraft Museum

# Aircraft Hangar

# Distribution / Fulfillment Centers

# Outdoor Patio Heating: Restaurants/Cafes

# Fire Stations

Many Bays/Doors, High Air Change, Large Cold Mass Intrusion

# Indoor Tennis Facilities

# Light Rail Maintenance

# Heavy Equipment Shops
