

Big, Smart, and Everything: Data, Technology, Buildings, Cities, and the IoT

Drury B. Crawley, PhD
FASHRAE, BEMP, FIBPSA, AIA
Bentley Systems, Inc.
20 March 2023

1

This ASHRAE Distinguished Lecturer is brought to you
by the Society Chapter Technology Transfer Committee

Complete the Distinguished Lecturer Event Summary Critique

- ❖ **CTTC needs your feedback to continue to improve the DL Program**
 - ✓ Distribute the DL Evaluation Form to all attendees
 - ✓ Collect at the end of the meeting
 - ✓ Compile the attendee rating on the Event Summary Critique
 - ✓ Send the completed Event Summary Critique to your CTTC RVC and ASHRAE Headquarters

Forms are available at:
www.ashrae.org/distinguishedlecturers

2

VOLUNTEER!

www.ashrae.org/volunteer

BECOME A FUTURE LEADER IN ASHRAE –
WRITE THE NEXT CHAPTER IN YOUR CAREER

ASHRAE Members who are active at their chapter and society become leaders and bring information and technology back to their job.

YOU ARE NEEDED FOR:

- ❖ Society Technical Committees
- ❖ Society Standard Committees
- ❖ Chapter Membership Promotion
- ❖ Chapter Research Promotion
- ❖ Chapter Student Activities
- ❖ Chapter Technology Transfer

Find your Place in ASHRAE and volunteer

3

ASHRAE is a Registered Provider with The American Institute of Architects Continuing Education Systems. Credit earned on completion of this program will be reported to CES Records for AIA members. Certificates of Completion for non-AIA members are available on request.

This program is registered with the AIA/CES for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product. Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

Big, Smart, and Everything:
Data, Technology, Buildings, Cities, and the IoT
Approved for 1 LU/HSW by AIA, course Crawley03

BUILDING INDUSTRY TRENDS

- Centralization of Ownership (large chains, owners)
- Climate change mitigation / ~~carbon regulation~~
- Green/sustainable/living buildings
- BIM /digital modeling
- Benchmarking/data!
- NZEB/NZEC
- Resilience
- IoT/Smart everything

22

DIGITAL TWINS

Virtual replicas of a physical product, process, or system—bridge physical and digital worlds.

Early Uses:

- Infrastructure
- Modeling
- Transportation
- Cities/Urban Planning

23

digital twin

/ dig-i-tal twin /

noun

1. A Digital Twin is a virtual representation of real-world entities and processes, synchronized at a specified **frequency** and **fidelity**.

ARTIFICIAL INTELLIGENCE?

- Artificial intelligence – the techniques used to teach computers to learn, reason, perceive, infer, communicate and make decisions similar to or better than humans
- Comprising:
 - **Machine Learning** – science of getting computers to act intelligently without being explicitly programmed
 - **Neural Networks and Deep Learning** – Neural Networks automatically learn about the features of a specific object based on large amounts of training data and power Deep Learning
 - **Adversarial Networks** – AI systems embedded with multiple neural networks that compete with each other, a path towards unsupervised learning

Wall Street Journal Pro 2018 Advances in Technology Push AI Into the Mainstream

30

MACHINE LEARNING ... JUST MATH, STATS, DATA

The New Stack 4-7-2017 Machine Learning Is Not Magic: It's All About Math, Stats, Data, and Programming

31

33

AI ADOPTION COULD CREATE TRILLIONS IN VALUE

- Tech giants spent an estimated \$20 billion to \$30 billion on AI in 2016
- In 2017, \$15.2 billion was invested in AI startups around the world, and nearly half (48 percent) of that total went to China; 38 percent was invested in the United States.
- AI could potentially deliver additional global economic activity of around \$13 trillion by 2030

Wall Street Journal Pro 2018 Advances in Technology Push AI Into the Mainstream

34

SMART TECHNOLOGY, BUILDINGS, CITIES

35

SMART CITY?

“Smart cities put data and digital technology to work with the goal of improving the quality of life”

“Smart cities add digital intelligence to existing urban systems, making it possible to do more with less.”

“Smart cities use data and technology to make better decisions.”

McKinsey Global Institute 2018 *Smart Cities: Digital Solutions for a More Livable Future*

“Using digital technology to solve the timeless problems of cities.”

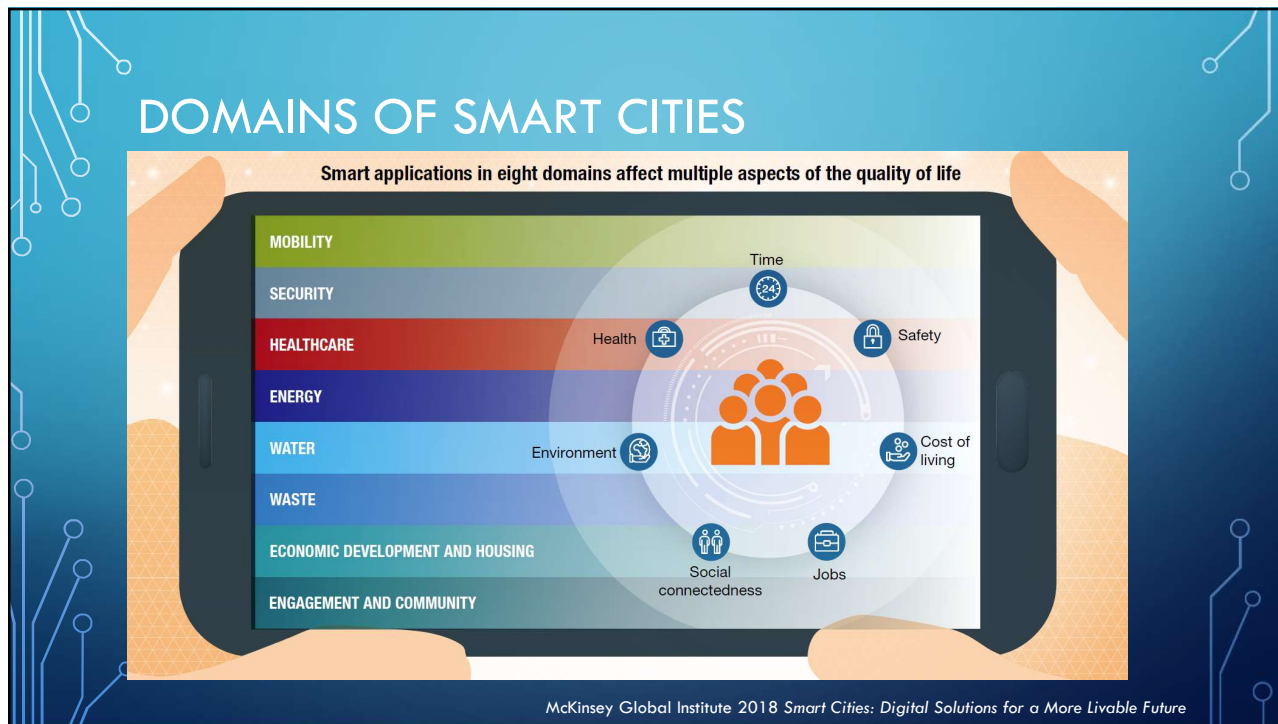

Anthony Townsend 1-14-2019 Architect Magazine Q+A: *What is a Smart City?*

36

“Smart infrastructure provides the foundation for all of the key themes related to a smart city...”

United Nations - Economic and Social Council
Report of the General Secretary – February 2016

41

SOME FORECAST BENEFITS OF SMART CITIES/INFRASTRUCTURE

- Enhance urban mobility
 - Public transit fare, toll and parking management
 - Traffic/transit optimization
- Smarter infrastructure
 - Citizen reporting
 - Service management
- Strengthen public safety
 - Improved safety, reporting, evidence collection
 - Digital hearings – speeding tickets
- Improve citizen and social care
 - Streamlined application process – govt interaction
 - Improved government services
 - Improved social care

2019 Microsoft Bringing smart living to your city

42

ANATOMY OF A SMART CITY

"The 19th century was a century of empires, 20th century was a century of nation states and the 21st century will be a century of cities."

THE WORLD IS NOW URBANIZED

% of population living in cities

Year	% of population living in cities
1800	3%
1950	29%
2008	50%
2040	65%

1.3 million people are currently moving into cities each week

There are **21 MEGACITIES** With over 10 Million people

Largest City Tokyo 36 Million +

If it were a country, it would rank 35th in population size

29 # of Cities with more than 1 million People

By 2025, the number of megacities is expected to reach with an additional five in Asia (Beijing, Chongqing, Guangzhou, Jakarta and London), two in Latin America (Bogotá and Lima), and one in Africa (Kinshasa)

1950: 83
2011: 500+
1900: 12

China alone will have 221 cities with 1 million + people by 2025

What does this look like in DEVELOPING CITIES?

Shadow Cities | Informal Settlements | "Slums" | Favelas

The majority of world population growth will occur in the urban areas of developing countries, whose population is projected to increase

2.5 billion in 2009 TO 5.2 billion in 2050

2x This number is expected to double to 2 billion by 2030

1 billion people call "slums" home today

The UN defines a slum as a household that lacks access to one or more of the following:

- Access to improved water
- Access to improved sanitation
- Security of tenure
- Durability of housing
- Sufficient living area

www.postscapes.com

43

ECONOMIC INFLUENCE

The top 600 urban centers generate **60%** of global GDP

In the developing world, as much as 80% of future economic growth will occur in cities

ENVIRONMENTAL IMPACT

Cities use **60%-80%** of the world's annual energy needs

Lighting alone represents **19%** of the world's total electricity consumption

ALL OF THE ABOVE

The need for SMARTER CITIES

DRIVEN BY: Sensors + Networks + Engagement

RESULTING IN REAL-TIME URBAN INFORMATICS

With the combination of low power sensors, wireless networks, and web and mobile-based applications, Smart Cities have arrived.

MEASUREMENT: Your city as a platform

ENVIRONMENT	SAFETY	TRANSPORTATION	UTILITIES	BUILDINGS
By way of new sensor networks the accurate monitoring of environmental conditions like pollution levels, water quality, and weather will all become possible.	Structural Health Monitoring of buildings, bridges and dams as well as advanced warning systems in emergency situations can now be put in place.	Through sensor-enabled roadways and street lights, real-time transit and traffic can be managed for the purpose of reducing congestion and fuel inefficiencies.	A smart utility grid will empower end-users to be more aware of their energy usage, and allow utility companies to address only the much-needed or water usage required.	Smart Buildings utilize monitoring devices that track usage and empower users and service providers to better control and reduce electricity demands.

44

SMART CITY IN A BOX

5J has developed a set of apps based on the four pillars of a Smart City - Sustainability, Efficiency, People and Security. These apps can be used independently or in conjunction with other apps for a seamless monitoring and management.

SUSTAINABILITY

- ENERGY MANAGEMENT**
Collecting energy usage data through meters in buildings to advise clients how to mitigate the energy usage.
- WATER MANAGEMENT**
Detect leaks by using camera analysis to measure moisture in water.
- CLIMATE CHANGE AND FLOOD MODELLING**
Tool that allow users to model flooding and create change, adaptability in time that are in a conceptual stage.

EFFICIENCY

- SMART LIGHTING**
Sensors and cameras in light fittings that allow light to dim and pressure is detected, saving energy and expenditure.
- PREDICTIVE LIFT MAINTENANCE**
Collection and analysis of data received from sensors installed in lifts to predict breakdowns.
- TRAFFIC MONITORING**
Cameras and video analysis installed at highways to detect traffic jams, accidents and other traffic misconduct.

PEOPLE

- ITOWN**
A mobile app allowing users to conveniently take pictures of defects and quickly feedback to city council.
- SMART HOME**
A mobile app that can control both locally and remotely, the aircon and lighting curtain of home.
- ELDERLY MONITORING**
Involvement of smart sensors to detect the well-being of elderly persons and their requirements.
- SMART TOILET**
A sensor-based level of the toilet to alert or take care out of toilet paper, enabling the deployment of cleaners based on need rather than scheduled cleaning.

SECURITY

- FIRE & SMOKE DETECTION**
Cameras and video analysis that detect fire and smoke.
- SMART CCTV**
Smart cameras and video analysis to facilitate speed-courtesy, target intrusion, objects left unattended and vehicle plate recognition.
- FACIAL RECOGNITION**
Cameras that capture with stored data used to identify blacklisted individuals.
- BEHAVIOUR ANALYTICS**
Cameras that detect persons who may be drinking in a pub.

45

SMART MANUFACTURING

I4.0

8. Big investments with big impact: It's time to commit

7. Industry 4.0 is accelerating globalization, but with a distinctly regional flavor

6. Robust, enterprise-wide data analytics capabilities require significant change

5. Data analytics & digital trust are the foundation of transformation

1. Industry 4.0 - From talk to action and implementation

2. Digitization drives quantum leaps in performance

3. Deepen digital relationships with more empowered customers

4. Focus on people and culture to drive transformation

PwC 2016 Strategy & Global Industry 4.0 Survey

46

Global Information and Reliability Portal

Get a 360° view over all plants, KPI's, maintenance alerts and real-time production data.

Predictive Maintenance

Predict tool defects and machine downtimes before they happen to take proactive maintenance actions.

Real-time Monitoring

Process production sensor data in real-time from machines to the global reliability portal.

Predictive Quality

Increase product quality and reduce waste and costs by analyzing sensor data in the production process.

Process Mining

Analyze process steps, throughput time and its main drivers to derive process optimization measures.

Location-Based Solutions

Record, analyze and visualize position and movements of any resources in real time to improve shop floor and logistics efficiency.

Analytics $f(x)$ Statistical Modeling

Data Sensor data
Temperature, vibration, pressure, etc.

Technology Cloud Platform & Services

Machine Learning

Production data
Utilization, quality, setup time, etc.

Big Data Services

Simulation

Plant and supplier KPIs
OEE, on-time delivery, output volume, etc.

47

INTERNET OF EVERYTHING -- IOT

48

INTERNET OF EVERYTHING

With 5G wireless and ubiquitous data sensors becoming available, every device that collects data can share it – supporting real-time decision-making for controls, utility grids, buildings, traffic, and transportation. Imagine dozens of sensors ensuring our comfort in our workplaces while optimizing energy efficiency and sustainability

Benefit of 5G is not **high bandwidth** (transmission capacity) but **low latency** (delay before data transfer begins following transfer request)

49

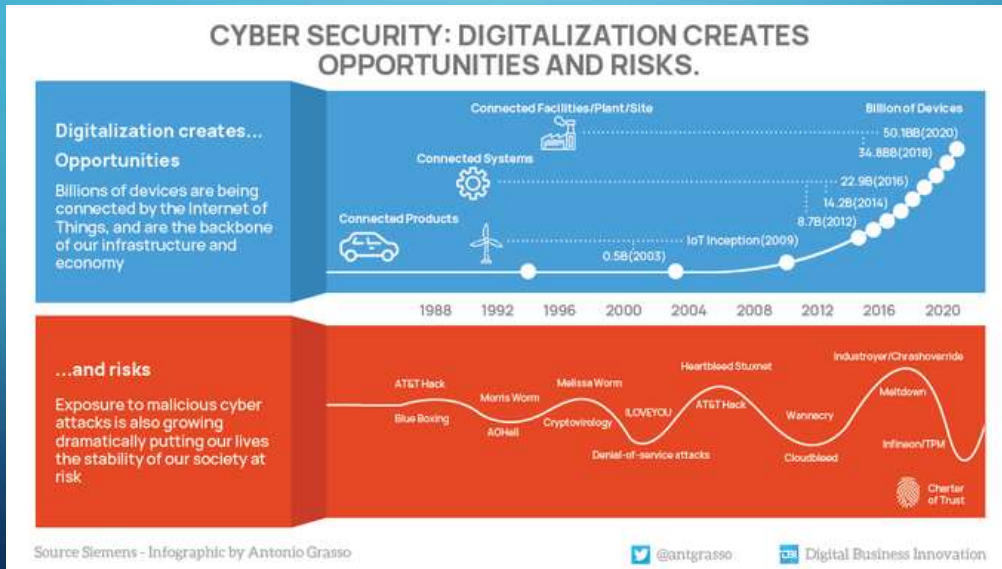

50

51

IOT REQUIRES CYBER SECURITY

52

IOT CHANGING DESIGN AND OPERATION

- Data collection to analyze use of spaces
- Sharing information and knowledge

Archipreneur 1-29-2019

53

54

IOT AND WIRELESS

Wireless Sensors Fill the "Data Gaps"

Gateways
Collect & process all sensor data and sends securely to cloud endpoints & applications.

Occupancy & Presence Sensors
Allow for tracking & reporting on conference rooms, restrooms, desks, etc. - enabling space & cleaning optimization

Dynamic Safety Signage
Clearly indicate the status of a room, desk or common area with automated signage - building employee confidence.

Workplace Management
Enterprise applications for workplace tracking and reporting

Safe Workplace & Ops Teams
Responsible for monitoring, compliance and intervention

People Counting Systems
Camera-based systems that allow for tracking of people and groups maintain real-time occupancy counts, track workplace density and enforce social distancing rules.

Activity & Motion Detectors
Can be affixed to a wide variety of assets and systems to monitor activity - such as equipment use, HVAC operation, hand sanitizer dispensing & more.

Action & Alert Buttons
Small buttons that can trigger alerts or log events anywhere - such as tracking usage, unsafe situations, rooms in need of cleaning, or to call for assistance.

Workplace ID Badges
These allow for people counting & density tracking within the workplace.

63

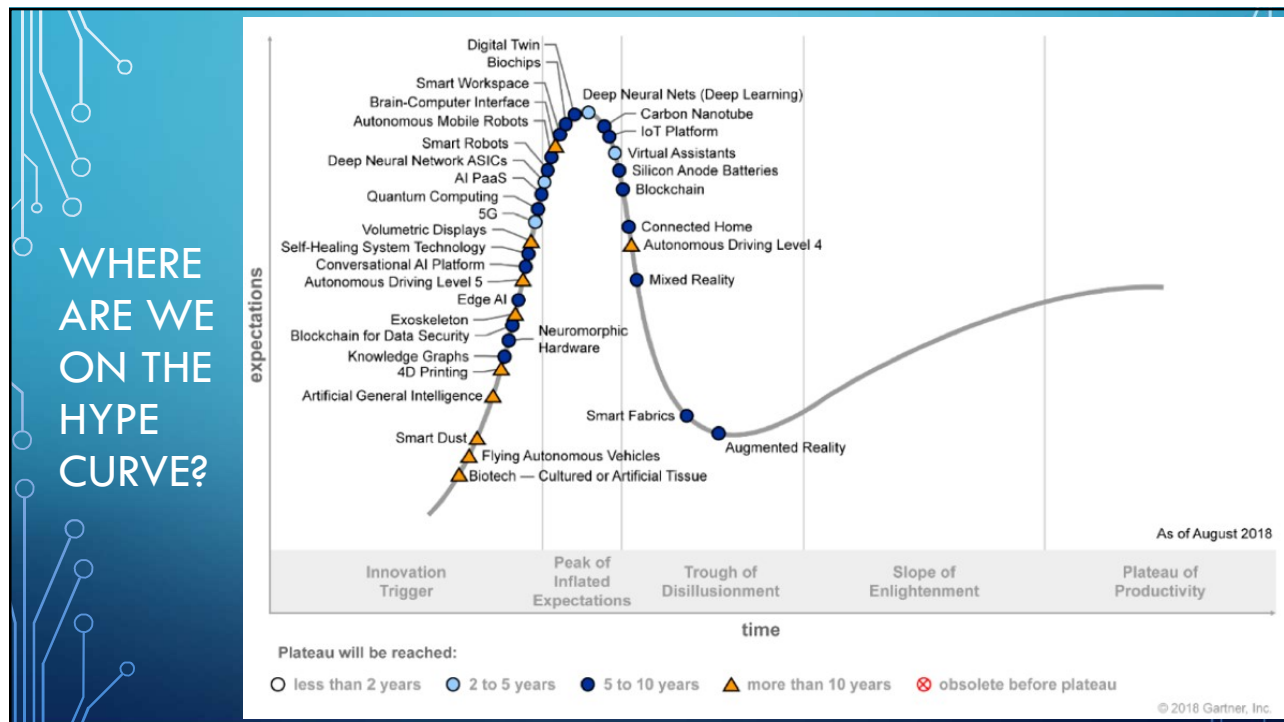

64

65

66

67

SUMMARY

- 3-D digital models (digital twin) make it easier to understand our buildings, communities, and their interactions with environment
- Sensors becoming ubiquitous in our lives
- Security, privacy and data ownership become critical components
- With 5G deploying, data connectedness makes Smart Cities possible – powerful tool for policymaking or building owners
- Anything that is measured locally now will be connected in future – Smart Buildings → IoT → Smart Cities
- Data analytics (BI, machine learning, AI) allows us to find trends and causes not clear from our limited data today
- Much of what is described for IoT, Big Data, AI, Smart today ... a lot of hype

68

CHALLENGE: PROVIDE CLIENTS WITH MULTIPLE METRICS

Energy
Demand
Cost
Water
IEQ
Carbon

Business model
(sales, student, occupied room,
business unit: barrel of beer, case of wine)
